About Mars Hope Challenge

The aim of the competition is to simulate the conditions that astronomers see and go through, to explore the challenges that exist on the planet Mars.

The Challenge

Why exploring Mars planet is that challenging?

1

No astronaut has yet to reach the surface of the planet Mars.

2

Difficulty sending spaceships or even a robot to the surface of Mars that can return to us with samples from the red planet.

3

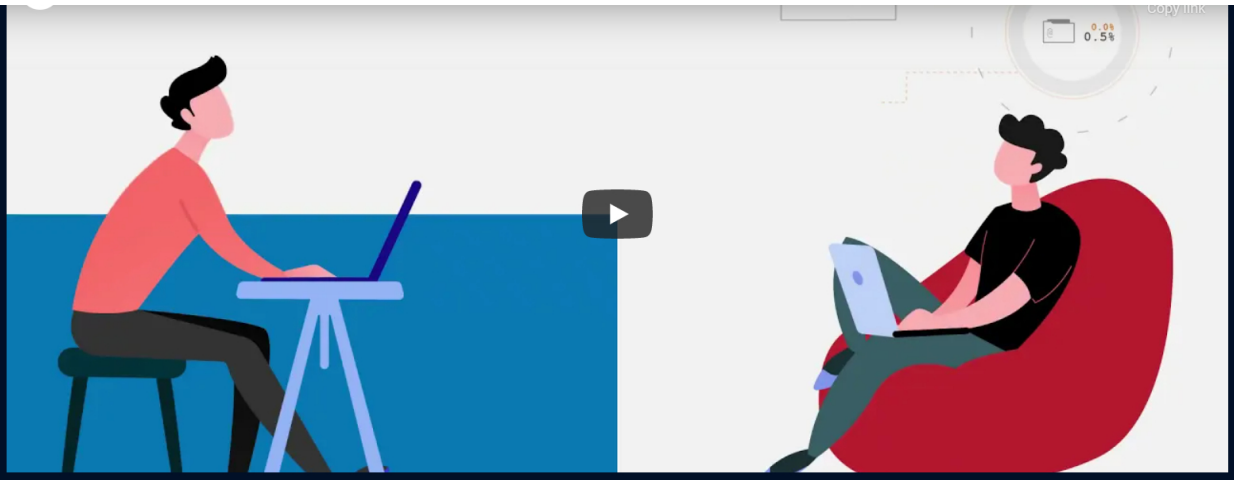

The bulk of the astronomers' efforts and costs goes to analyzing complex images and data collected by rovers sent for a one-way trip to the planet to analyze it.

Based on these challenges, we will simulate these conditions realistically and scientifically so that students live the role of space scientists and engineers during their explorations and scientific experiments to analyze the data sent to them from the planet Mars.
